2. APPLIED NUMBER

2.1 ESTIMATION

In a non-literate society with a food-gathering and hunting economy, absolute standards are irrelevant, and people are not accustomed to using descriptive terms out of context.

A technological economy requires absolute standards of weight and measurement. Most people rely heavily on the availability of these measures, and so the skills of estimation are not well developed. Western education forces children to think in abstract terms of measurement at an early age.

In the Aboriginal society, without indigenous arbitrary standards of measurement, the skills of estimating are very well developed. Children learn to estimate by watching adults and by trial and error in situations where they are always highly motivated, because estimation is never a theoretical exercise.

Estimation in hunting and gathering takes place as a matter of course in everyday life. A man estimates how far he can travel before nightfall. When he aims his spear he throws it at the precise angle for it to travel through the air to reach its objective. When the target is a fish under water he must take the refraction of light into account. At all times he must judge the strength of the wind very accurately.

A woman digging yams keeps on digging until, in her estimation, she has enough to feed her family. She might have to take into account the length of the homeward journey. She will weigh up the effort required to dig in hard soil against the estimated size of the yam still in the ground. When she gives her children yams or wood to carry home and carries a load on her own head, she knows just how much can be managed by each person over a certain distance without dropping any enroute.

I have been full of admiration at the way Aborigines know precisely when food is cooked. I have seen oysters cooked while still on the rocks, although I have not even tried to cook them that way myself. Pine needles are placed on top of the oysters, set alight and then doused with sea-water at the exact moment required to cook the oysters without either drying or burning the tiny molluscs. This is
<table>

a comparatively quick process, but I have observed the same precise estimation of time in longer processes such as when women cook damper. There are numerous other examples.

2.2 TIME

A large number of phrases refer to time in Anindilyakwa. Very likely one person's interpretation of a term varies from another's. In English we too have a varying sense of time. One person's idea of 'a while ago' does not always match another's idea of the same expression. It is also true that one person's idea of 'a while ago' differs according to the context. It is not always easy to pin down an exact English equivalent of the Anindilyakwa terms.

Non-Aborigines are not content to wait. They try to do several other things while waiting for something else to happen, sometimes forgetting the first task in hand. Time appears to pass so quickly when one is well occupied that one loses track of its passing. This is not so with Aborigines. They prefer to concentrate on one thing at a time and avoid the possibility of confusion from trying to do too many things at once. Waiting, in fact, is itself an integral part of the task.

Aborigines know when a damper is cooked because they are content to wait and they know how long to wait. They have a seemingly 'innate' sense of time span without clocks. They also know when it is the right time to do things. Their feeling for time is probably based on long reliance on the sun's movements and on their daily routine. It is now so inbuilt that it is still there without reference to the sun, even in cloudy weather. This sense of time is dependent on the maintenance of the traditional routine or on the firm establishment of a new one.

2.2.1 NATURAL PHENOMENA AS TIME MARKERS

Aborigines are much more aware of changes in the environment than most non-Aborigines are. They automatically observe every alteration in the sun and the moon and in the seasons of the year.

a) Sun and moon

The sun mamawura and moon yimawura are used for counting the days and months. In the old days hand gestures were used to describe the time of the day at which events took place. A person pointing to
kekadiya adinuba
larruwura akwudangwa
nalaruwrudinama arakba
kumawiyebo-manja mamawura
mumawiyebo-manja mamawura
awankilermur.da

it will soon be light
nearly mid-afternoon
it is already mid-afternoon
when the sun sets (future)
when the sun set (past)
nearly night time (literally 'rather dark')
the sky in a certain direction would say *numiyaminuma mamawura* 'the sun was like this'. *kumiyaminama mamawura* 'the sun will be like this' accompanied the hand gesture to describe the time of day in the future. Old and middle-aged people have retained this method today.

The word *mamawura* 'sun' with the addition of the d class prefix is used to describe a clock, *dumamawura*. *Dumamawura dadungwayarrka* 'a clock belonging to the hand' is used for a wrist-watch. The question *mambarrngarna mamawura?* 'How much sun?' is asked of someone with a watch or clock, when a person wants to know the time. An answer in English is expected. (*M* noun class prefixes often occur in time phrases because *mamawura* 'sun' is the noun understood.)

Both *mamawura* 'sun' and *marringa* 'sleep' are used for counting short periods of time. 'Every day' can be translated either *mababurni-langwa marringa* 'every sleep' or *mababurni-langwa mamawura* 'every sun'. Because of the influence of English the latter expression is becoming more common.

For Aborigines on Groote Eylandt day begins at sunrise and not at midnight. Therefore a patient coming to the hospital for treatment at 4 a.m. still refers to the events of the previous day as happening 'today'. We have the fixed idea that the day starts at midnight, and unless we realize that the Aborigines have an equally fixed, though different, idea, confusions can arise.

The basic terms for 'night' and 'day' are *meningalyarrngwalyilya* ~ *alyarrngwalyilya* 'at night, night-time' and *menungwulida* 'by day, day-time'. Although colour terminology is beyond the scope of this paper, it is of interest to note that *menungwulida* 'day-time' literally means 'belonging to colour' (*alida* 'colour').

There are various terms for the different parts of the day describing the sun's movements and the changes between darkness and light. Vocabulary is especially rich for periods of significant observable change. A few examples only are given.52

The terms for morning and afternoon are *wurdarriyu-wiya* 'in the morning' and *larruwura* ~ *larruwuri-langwa* 'in the late afternoon'. The word *larruwura* is not exactly the same as the English word 'afternoon' because it does not refer to the early part of the afternoon. *Mamerrikuwilyarra* 'midday' includes the early afternoon.
muwilyaba mamarika akwa yuwilyaba yinungkwura
one dry season wind and one wet season wind
'one dry season and one wet season (one year)'

mibinu-wiya mamarika
numangkarrinu-wiya mamarika

engku-wiya ~ engki-yada Saturday
eminingku-wiya ~ eminingki-yada Saturday

last Saturday
the Saturday before last
the Saturday before that
this coming Saturday
the Saturday after next
the Saturday after that

mingku-wiya ~ mingki-yada (mamawura)
mingku-manja (mamawura)

the other day (not specific)
the next day
b) Seasons

Time in longer spans than a few months can be counted by the seasons. The two main seasons in the year, the dry and the wet, are marked by the two main winds *mamarika* 'the southeast trade winds' and *ginungkwura* 'the monsoon winds'. 'One year' is the same as one dry season and one wet season. 53

The seasons are more frequently used for pin-pointing events than for counting periods of time. For instance, events in the past are described as taking place during the dry season or the wet season, or before or after these seasons. 54 (See sections 2.2.2 and 2.2.5 for this use of the suffix *-wiya*.)

One old woman who wanted to indicate a long period of time since a particular event took place began enumerating the names for the different wind directions. As well as four words for winds she included *kirijumija* 'Christmas', which is often used nowadays for 'year'.

2.2.2 TIME SUFFIXES

Many Anindilyakwa suffixes have different meanings in different constructions.

a) Time phrases

In most time phrases, the suffixes *-wiya* and *-yada* occur with reference to past time and *-manja* with reference to future time. The adjectives *enena* - *ena* 'this', *ebina* 'same', *engka* 'other', *emingka* 'different' all occur in time phrases. 55 They occur with the *a* noun class, except when nouns of the *m* noun class such as *mamawura* 'sun' are understood. 56

Note that because the English 'on Sunday' refers to both past and future time, *-manja* is often used referring to both past and future time when suffixed to names of the days of the week.

During the narration of past events, *mingku-manja* 'the next day', normally in a future context, also refers to the next day within the past time sequence. 56
akini-yada numangkarrinu-manja mamarika
nalikenuma angerriba

at the time when the
dry season wind was
blowing they went over
there

kinilikaju-manja nakina yangkwurrangwa,
akini-yada ngawa akeningmudinama
ngarna

when he comes here (at
that time) we'll find
out

ningilikenu-manja
ningambilyu-manja erriberribu-manja
kilikaju-manja

when I went
when I lived in the
bush
when I (will) go, if
I go

ningilikenu-murri-langwa ~
ingilikenu-mu-langwa

after I went

ningilikenu-murrwa
kilikaja-murrwa

before I went
before I (will) go

naru-wiya kilikena

before I went

naru-wiya alikira

before there were houses,
while there were no
houses

mangkarrkba muwalyuwa aduwaba

the wild plums are ripe
now
The demonstrative adjective akina 'that' occurs with the suffix -yada to indicate a particular time either in the past or in the future, 'at that time'.

b) Time clauses

In time clauses when the suffix -manja and the suffix combinations -murri-langwa -mu-langwa and -murru-wa are added to verbs they indicate various aspects of time. The suffix -manja occurs with the past and future tenses meaning 'when'. In the future it also means 'if'. The suffix -murri-langwa -mu-langwa 'after' occurs with the past tense, and the suffix -murru-wa 'before' occurs with the past and future tenses.

'Before' is also expressed in a negative construction, using nara 'not' and the suffix -wiya. In this case the suffix -wiya could be translated 'while' (see section 2.2.5).

2.2.3 TIME WORDS

The basic time words are aduwaba 'today', yarrungkwa 'yesterday' and arnungkwaya 'tomorrow'. However aduwaba has a wider area of meaning than the English word 'today'. It can include such expressions as 'now', 'nowadays' and 'at this time'. When 'today' is used in its restricted sense, it is often qualified by the time phrase memu-manja mamawura 'this very day'.

a) Ngambi-yada 'when?'

The suffix -yada is added to the interrogative root ngamb- to give the meaning 'when'. In most other time expressions -yada refers to past time, but in the interrogative -yada refers to both past and future time.

77
nilikenuma arakba  
he's gone now (in conversation)

neningaba arakba  
he's well now

likaja arakba!  
go now!

ngarrilikaja arakba!  
let's go now!

biya nilikena arakba  
and now (then) he went (in narrative discourse)

likaja enenu-wiya!  
go immediately!

ningardanga angwurra biya akini-wiya numurajanga  
I called loudly and jumped up immediately

kabilbayina adinuba  
(the water) will soon boil

ngambiyada neningabaduma? adinuba  
when did he improve? a little while ago

ningeningma arngki-darrba  
I nearly know, i.e. I'll soon learn it

arngki-darrba kinilyikarrburrukuma  
he nearly slipped

arngki-darrba kinumanguma  
he nearly got it

larruwura akwudangwa  
early mid-afternoon

akwudangwa durdurla  
early bell (time)
b) **Arakba** 'now, already!'

The time word **arakba** 'now' focuses on the aspect of completion rather than time at a particular moment. It refers to actions that are already completed and states that have already changed. It is used alone in answer to questions such as 'Have you finished?' and 'Has he gone?'. It is also used with the imperative and hortatory moods to elicit an immediate response. In narrative discourse it occurs frequently and may be translated by both 'now' and 'then' in English.63

Sometimes **arakba** 'already' translates the English 'after', as in a discussion about when an event took place, e.g. **wigerrirda arakba** 'cyclone already' translates 'after the cyclone'.

c) **Enenu-wiya, akinu-wiya** 'immediately (now, past)'

The suffix **-wiya** added to the demonstrative **enena** 'this' gives the meaning 'immediately, now'. It is used less than **arakba** 'now' but unlike **arakba** it is an answer to the question 'when ...?'.64 When 'immediately' refers to an event in the past, **akinu-wiya** literally 'that while' is used.64

d) **Adinuba** 'soon', 'recently'

This word is used to refer to actions about to happen or having just happened and to states just changed or about to change. It has a more restricted area of meaning than the English words but is frequently used alone in answer to the question 'when...?'.65

e) **Arngki-darrba** 'soon', 'nearly'

Another word for 'soon' is **arngki-darrba**, literally 'time short'. With reference to a past event **arngki-darrba** occurs with a verb in the subjunctive mood meaning 'nearly'.66

f) **Akwudangwa** 'nearly'

The primary meaning of **akwudangwa** is 'near' in the spatial sense. The Anindilyakwa speaker sees a close connection between distance and time. Therefore **akwudangwa** also means 'nearly' when it is used with an adverb of time or a noun in reference to a future event or change of state. This word is also used alone in answer to the question 'when ...?' and may sometimes be interchangeable with **adinuba** 'soon'.67
I've never seen him before until today.

I've never seen that kind of truck until recently.

A very long time ago (see Appendix 1).

Long ago.

A rather long time ago.

Not so long ago (literally 'middle middle').

A fairly short time ago.

A short time ago.

A very short time ago (literally 'yesterday yesterday').

Very soon.

Soon.

Fairly soon.

Later.

Much later.
g) *Aduwabu-manju-bu* 'today, for the first time'

A positive answer to such questions as 'Have you ever seen...?' is the idiomatic expression *aduwabu-manju-bu* 'today, for the first time'. This construction combines *aduwaba* 'today' with the suffixes *-manja* 'on, at' and *-bu* (emphasis). The parallel constructions *adinubu-manju-bu* 'recently for the first time' and *yarrungku-manju-bu* 'yesterday for the first time' combine *adinuba* 'recently' and *yarrungkwa* 'yesterday' with the same suffixes.  

2.2.4 SEQUENCING AND COMPARISON OF TIME

The basic words in the sequencing of time are *arakba-wiya* 'long ago' and *adinuba* 'recently, soon' (see section 2.2.3). These words can be modified in various ways to denote different intervals of time with respect to the present. When comparing one past event with another, the intensifier *angwurra* 'more' is used giving *arakba-wiya angwurra* 'a much longer time ago'. When comparing one future event with another, *amigerra* 'continuing' is used giving *ambaka amigerra* 'much later'.
1. likaja nungkuwa adinuba-wiya umba ngayuwa kilikajama arijilangwa
go you first but I will go afterwards

2. iyengmena nungkuwa umba ngayuwa karijidinama arijilangwa
lead you but I will go last afterwards

Both 1 and 2 mean the same, 'You go first and I'll go last'.

adinuba-wiya kilikajama shop-uwa,
kembirra arijilangwa kingangarrenama
dakina akwa kingaminarjirrenama
dumbala ngalilangwa akwa
kingaminidakinama aninga

First I will go to the shop,
then afterwards I will visit
her and wash her clothes and
cook her food.

wurrababurni-langwa wurriyukwayuwa
nalikenuma waranjubawiya
all the children came early
(literally 'quickly')
yikilikaja waranjubawiya nara ambakilangwa
you will come quickly not slowly

'Come quickly and not slowly!'
a) *Adinuba-wiya* 'beforehand, first'

The adverb *adinuba-wiya* means primarily 'beforehand, first'. It is a compound word, combining *adinuba* 'soon' and the suffix -*wiya* which occurs in time phrases. 70

b) *Arijilangwa* 'afterwards, last'

The adverb *arijilangwa* means primarily 'afterwards, last'. This word has the same root as -*arijidina* 'come, go last'. The suffix -*langwa* occurs on verbs meaning 'after', and -*ariji-* may have occurred alone in the past, but not today.70

c) *Adinuba-wiya* and *arijilangwa*

Because time was not measured in the absolute sense, the concepts 'early, earlier, earliest' used to be less significant than they are today. Now because of the introduction of the clock the meaning of *adinuba-wiya* 'first' has been extended and the concept of earliness included. Similarly *arijilangwa* 'last' has been extended to include 'late, later, the latest'.

When *adinuba-wiya* 'first' and *arijilangwa* 'afterwards' describe consecutive events, only one can be *adinuba-wiya* but several following events can be *arijilangwa* 'afterwards, later'.71 This sequence corresponds with English. However, people arriving after the first arrival come *arijilangwa* 'afterwards, later' in relation to other people, even though they may still be in time for the following event.

Reference to a number of people all arriving early might seem to create a problem in Anindilyakwa. In this case an Anindilyakwa speaker would use *waranjubawiya* 'quickly' to translate the English 'early'.72

A teacher frequently wants to say to the children, 'Come early and don't be late!' The concept is not lacking, but once again we need to forget our favourite word 'early' and verbalise the concept differently for effective communication, using the adverb 'quickly' or an adverbial phrase such as 'before the bell'. Children arriving late for school after the bell has rung can be reprimanded for coming *arijilangwa* 'late'.
enungw-adinuba-wiya alawudawarra: the first story
menungw-arijilangwa mijiya nga: the last boat
nenungw-arijilangwa nenungkwarba: the last man

niliraka adinakba angwura: he lit the fire (in readiness for cooking)

numudayinuma nenungw-amiyerra: he was paddling for a long time
ning-enungkwurakba angbilyuwa: I have been sick for a long time

nening-angkawura nambilyuma yelakwa: he always lived here
ngarriyekirrerra akambilyama
ngarning-angkawura: we will be happy all the time
The adjectival form of adinuba-wiya 'first' and hence also 'earliest' is ening-adinuba-wiya ~ enungw-adinuba-wiya. Similarly the adjectival form of arijilangwa 'last' and hence also 'latest' is ening-arijilangwa ~ enungw-arijilangwa. Both words are formed by prefixing ening- ~ enungw- 'belonging' to the adverb.73

d) Adinakba 'first'

The adverb adinakba 'first' carries the idea of preparation in readiness for a foreseeable event. In a non-future oriented society it is normally an event which is imminent.74 Because of this specialised meaning it is not used as frequently as adinuba-wiya 'first'.

2.2.5 DURATION OF TIME

The suffix -wiya is added to aduwaba 'today' to give the meaning 'during the day', i.e. just for the day. The suffix -ma is added to marringa 'night - sleep' to give the meaning 'for the night, overnight'.

'For a little while' is expressed by the adverb aduwaya. 'For a long time' is normally expressed by idiomatic constructions formed by adding adjectival and pronominal prefixation to the adjectives amiyerra 'continuing' and enungkwurakba 'old'. Ning-enungkwurakba, literally 'I old', can mean 'I have been waiting for a long time'.75

A similar construction is formed using arngkawura - angkawura 'once' to give the meaning 'always'.76 In answer to the question 'Will he come back?' the answer nening-angkawura means that he has gone for good, i.e. for the foreseeable future, although in fact this could happen to be merely for a few months.
numungkwulingu-wiya nakina nenar.dirranguma
while he slept they speared him
nambilyu-wiya ~ nenibu-wiya
while he was alive
niyukwuiju-wiya

'I kept on going.'

ningarikumina wurdarriyuwiyu...wa
he fished morning
'He was fishing all the morning.'

nilikena ngawa nakinu...wa
he went still he
'He kept on going.'

ekbarra ambaka
the headache is still there
arukwa ambaka
still raw
ardirdarra ambaka
still hot (i.e. still too hot, so not cool enough)
angemina nalyubarinama ambaka
he is still being suckled

ningkenirringka ambaka?
Have you seen him yet?
nara ambaka kinirringka
I haven't seen him yet
ningkenirringkama ambaka?
Have you ever seen him?
nara kinirringka
I've never seen him
a) The suffix -\textit{wiya} 'while'

The suffix -\textit{wiya} 'while' occurs on verbs in the past tense to describe the continuing action during which a past event took place. It also occurs on adjectives describing continuing states.\textsuperscript{?7} It is not used as frequently as 'while' is used in English. Note the phrase \textit{naru-wiya} 'before (not while)' in section 2.2.2.

b) The suffix -\textit{wa} 'extension of time'

The suffix -\textit{wa} is added to a verb, adverb or pronoun in sentence final position to emphasise 'extension of time'. The final vowel of the word to which -\textit{wa} is added is replaced by \textit{u} and it is long and drawn out. This is symbolised by the insertion of three dots (see Appendix 1).\textsuperscript{78} Partial reduplication of the verb root may co-occur with this phenomenon and is underlined in the example. The tone is high throughout the word until the last syllable, which has a sharply falling tone.

c) \textit{Ambaka} 'later', 'still'

The aspect in focus in this time word is a state which extends from the past into the present but normally anticipates change. In answer to a question such as 'Are you ready to go?' the answer \textit{ambaka} 'later (soon but not yet)' may be given to delay the departure, even for only a short time. The idiom \textit{ambaka jayi}, literally 'later away', is used as a delaying tactic, the equivalent of 'wait a minute'.

When waiting for an expected change the word \textit{ambaka} is used where English uses 'still', sometimes meaning 'still too...', according to the context.\textsuperscript{79}

Although \textit{ambaka} can be translated 'yet' and 'ever' according to the context, the negative construction \textit{naru ambaka} 'not yet' implies the possibility of change and thus cannot be translated 'never'.\textsuperscript{80}

d) \textit{Ngawa} 'still, enough'

The primary meaning of \textit{ngawa} is 'still'. It is used when a change in the current situation or state has not taken place, is not expected and in fact is not warranted or required. This word is used when the positive aspect is implied by 'still ... enough' in English.
1 ardirdarra ngawa
   eningaba ngawa
   nakina ngawa
   neniba ngawa
   numungkwulinya ngawa
   nuwaranga ngawa

2 ena ngawa
   akinu-bu ngawu-da

3 numebumebinuma
   numudumudayina
   nara kinawiyuwiyeba

4 nara alikanguma nakina
   nara kinalilikaja nakina

still hot (enough)
still all right
he's still there - he's still the same
he's still alive
he was still sleeping, he kept on sleeping
he still refused
this is all
that's the end
he used to sing, he went on singing
he kept paddling
he never used to go inside
he's not going
he never goes
However, when the negative aspect is implied by 'still too ...' in English, the Anindilyakwa *ambaka* is used.

Note the use of *ngawa* with reference to continuing actions, often translating the English 'keep on ...'.

Because of the positive implication of *ngawa* it is not used with *nara* 'not'. 'Not enough', in the sense of 'not cooked enough', is expressed positively using an opposite concept.

*Ngawa* 'enough' is used alone as a normal polite answer to such questions as 'Would you like something to eat?'. It is thus the equivalent of 'No thank you' in English but it is phrased from the positive point of view of a person satisfied with his present state.

The idiom *ningena ngawa*, literally 'I (this one) enough', is another polite expression. It is used in answer to such questions as 'Are you all right, i.e. comfortable?' when no change is needed.

The idiom *ngawa arakba*, literally 'enough now', is used as a command to stop an action, equivalent to 'that's enough!'.

Several idiomatic expressions occurring as closure of a discourse all include *ngawa* 'enough'. This extends the underlying implication of satisfaction with the status quo to a sense of finality.

e) Habitual and continuous action

Habitual action and action which takes place over a long period of time are signalled by repeating part of the verb root. The part of the word that is reduplicated has been underlined.

Except for one instance the pattern of prefixing and suffixing verbs is the same whether reduplication occurs or not. However, when reduplication occurs on a verb in the present tense, in the negative mood, the past negative prefix is used with the present positive suffix instead of the normal present negative affixation.

In English 'never' is frequently used in the negative 'I never went ~ go, I will never go'. Compare the Anindilyakwa translation of 'I have never seen him' in example 80.
mebina ngawa!
wi-ji-rena ngawa!
kinumakumakina ngawa!

keep on singing!
keep on pushing it!
always tell him! keep on telling him! (you will keep telling him)

naru-wiya kinambilya
nirumungkwar.dinu-wiya arakba
naru-wiya wiyerrirda
nijerridu-manja yalyukwa
nuwambilyu-manja wurrakina
yelakwa alukwanji-yada

before he was (born)
when he was already crawling
before the cyclone
when the rain finished (at the end of the wet)
when ~ while they were here for the dancing
Commands to keep doing something habitually or continuously are translated by the future tense in Anindilyakwa unless the action to be continued is already in progress when the imperative is used, sometimes with reduplication. However the verb -likaja 'go' never takes reduplication in the imperative.

2.2.6 INTRODUCED TIME WORDS

Names for the days of the week and the months of the year have been borrowed from English, in addition to the terms 'week' and 'Christmas' (used for 'year'). 'Sunday' is sometimes used for 'week'. All these words have been introduced into the a noun class.

Old people today differentiate between certain days of the week. The days Monday, Tuesday and Wednesday are described as aruma, literally 'big', but Thursday and Friday are described as ayukwujiyi, literally 'little'. Because pension cheques arrive on Thursdays, on the previous day one can ask one of the old women the following question:

arungkwaya ayukwujiyu-manja na?

tomorrow little-on interrogative

This question will be interpreted as 'Tomorrow is Thursday, pension cheque day, isn't it?'. When Thursday comes, the old women frequently say, 'adwaba ena ayukwujiyi', literally 'today this little'.

2.2.7 EVENTS AS TIME MARKERS

Time is related to events and life-stages, for which the Aborigines have very keen memories. Important events are used to mark the time when events of minor significance are described. Events are also described as taking place during a certain person's life-time, before so and so was born, after so and so died, and so on. My kayuwa 'dilly-bag', made by one of the women some years ago and still in use, is frequently commented on in the following way:

'So and so made it while her mother (now deceased) was still strong.'
(See section 2.2.2 for more examples.)

2.2.8 VERB TENSE AND MOOD

a) Present and future tenses

English speakers use the present tense with future meanings, e.g. 'I am going to Darwin next week'. English also uses the present tense in such phrases as 'he runs fast' and 'he can skip'. Anindilyakwa
Slowly he goes.

He's walking slowly.

He runs fast.

He will run.

He runs fast - he can run fast.

He will dance - he can dance.

I will climb that tree.

Shall I climb now?

I finished (one form only).

I cooked (one form only).

I arrived (near past).

I arrived (normal past).

He arrived the other day.

He didn't arrive.

He should not have arrived today.

When did he arrive?

He arrived here yesterday.

He arrived here on foot yesterday.

He arrived here yesterday in the afternoon.

They have just gone.
is more precise and normally limits the use of the present tense to events happening at the present time, using the future tense for all other situations.\textsuperscript{87} There are two forms of future tense, one of which refers to the near future only.\textsuperscript{88}

b) Past tense

There are usually two forms of the past tense. One has been labelled the 'normal past' and the other has been labelled the 'near past'.\textsuperscript{89} The normal past tense is more common than the near past. It always occurs in the negative and subjunctive moods, and normally in the interrogative mood.\textsuperscript{90}

The near past tense occurs describing some actions which have taken place within about the last twenty-four hours. The choice of the form of the past tense depends on whether time is in focus or not. If time is in focus, then the near past is used. In the examples, the action took place during the last twenty-four hours and in each case a time word is included. The normal past tense is used for the verb 'go' regardless of focus.\textsuperscript{91} The near past tense is underlined in each example.

take it immediately! pick it up!
take the tomahawk and chop this
tree straight away
take the tomahawk and chop that
tree over there
take my tomahawk and (then) chop
that cypress over there this
afternoon
In a narrative the normal past is used except when the near past tense focuses on a short interval of time between consecutive actions. The use of the near past for the verb 'go' is legitimate but not favoured by young people today.\textsuperscript{92}

c) Imperative mood

Verbs in the imperative mood often have two forms. The difference in meaning between the two forms is that one of them anticipates a more immediate response and so is also used for peremptory commands.\textsuperscript{93} In English the imperative mood, like the present tense, can refer to the future, but in Anindilyakwa the imperative mood cannot refer to the future.\textsuperscript{94}

When two commands are given, the imperative is used for both commands when an immediate response is required. When any interval of time is involved, the future tense may be used for one or both commands. The immediate imperative has been underlined in the examples.\textsuperscript{95}

where are they? they are a

long way off

they live far away

the jungle is nearby

the jungle is quite near

the jungle is far away

the people are far away

go further away!
The teacher who says 'Go outside when you finish writing' should not be surprised if the children jump up and go straight outside, especially as the English word 'finish' is usually interpreted as a completed action rather than an action requiring completion. An Anindilyakwa speaker would be more likely to say something such as 'Finish your work and then go outside'.

2.3 DISTANCE

Time and distance are closely connected, e.g. 'As far as Darwin' is only another way of saying, 'until one has reached Darwin'. A short distance means that a short time is required to cover that distance. Thus arnkgidarrba 'soon' is also used for 'near' and akwudangwa 'near' is also used for 'soon'. Similarly yandi-langwa, 'until' in a time phrase, translates 'as far as' with reference to distance. In English the underlying link between time and distance is less explicit.

The basic terms to describe positions of relative distance are the adverb akwudangwa 'near' and the adjectives awurrikalya - awilyikerra 'far away'. Engku-manja 'in another place' is also used for 'far away'. Engku-wa 'to another place' can be used for 'in another place' and thus for 'far away' in addition to its literal meaning. The adjectival prefix awank- 'rather' and the emphatic suffix -ka occur in the comparison of distance which is listed opposite. Note the noun class agreement in the use of these words. The intensifier angwurra 'more' may be used with engku-wa 'far away' to indicate 'further away'.

The English term 'half-way' is often used by Aborigines speaking English, but as this is used in the sense of 'part-way' it can be very misleading when giving directions. (See the reference to 'part of' in section 1.2.3.)

Verbs of motion have certain features added to express a great distance and thus a great length of time (see section 2.2.5).
